Commitment on cutting Carbon Impact

ICAAMC members support the 2015 Paris Agreement global goal to achieve net zero emissions and are committed to proactively reducing carbon impact.

As an association we are dedicated to reducing greenhouse gas emissions:-

- Reduce own factory carbon - our members are working to achieve this through the use of carbon neutral energy and improving the efficiency of their manufacturing processes.
- Suppliers - our members are collaborating with their suppliers, who are not only seeking to reduce their own carbon but also play an important role as we look to reduce our overall carbon footprint.
- Customers – our customers face increasing pressures to reduce their carbon footprints. We are committed to assist customers with initiatives over the development of eco-friendly products, integration to maximise process efficiency and timely and informative information on maintenance to ensure compressors are working at optimal effectiveness.
